

INTERCALL ECC LYNC EDITION

IMPROVED GLOBAL COVERAGE WITH
SUPERIOR AUDIO QUALITY

Enhance your Microsoft® Lync™ Online meetings with more control and improved audio quality.

We have created a powerful conferencing solution for Lync environments. By using our Enterprise Connectivity Conferencing platform, we are able to provide you a truly integrated Lync meeting experience, combining PSTN and VoIP participants on a single call.

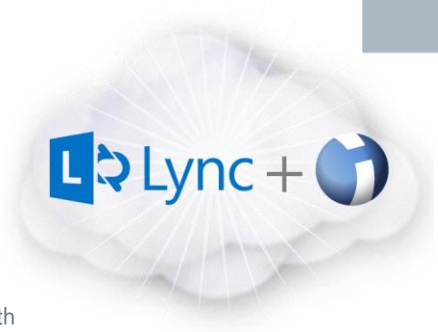

THE ECC LYNC EDITION ADVANTAGE

This on-premises Lync server solution is only available from InterCall. It improves your Lync ROI with better audio, meeting control and added features missing from Lync with standard SIP trunking. InterCall will provide SIP trunking capabilities.

- Experience cost advantages similar to on-premises conferencing solutions, but without the implementation pain, continuing support and maintenance overhead.
- Receive a single list of PSTN international dial-in numbers in all regions, including toll and toll-free.
- Get the same service, call flow, meeting features and support regardless of your VoIP or PSTN connection.
- See more productivity within your meetings when using our integrated meetings controls and features.
- Protect your meetings and account with security managed through firewalls and session controllers.
- Increase your efficiency and production by saving time and resources when you rely on InterCall's 24/7 support.

CONNECTING WITH ECC LYNC EDITION

- Seamlessly connect between local and toll-free InterCall dial-in numbers and the Lync client.
- Automatically embed InterCall dial-in details directly within the Lync client.
- Utilize the Lync client to power large, multi-national meetings without the use of costly SIP trunks.
- Provide operator assistance when needed.

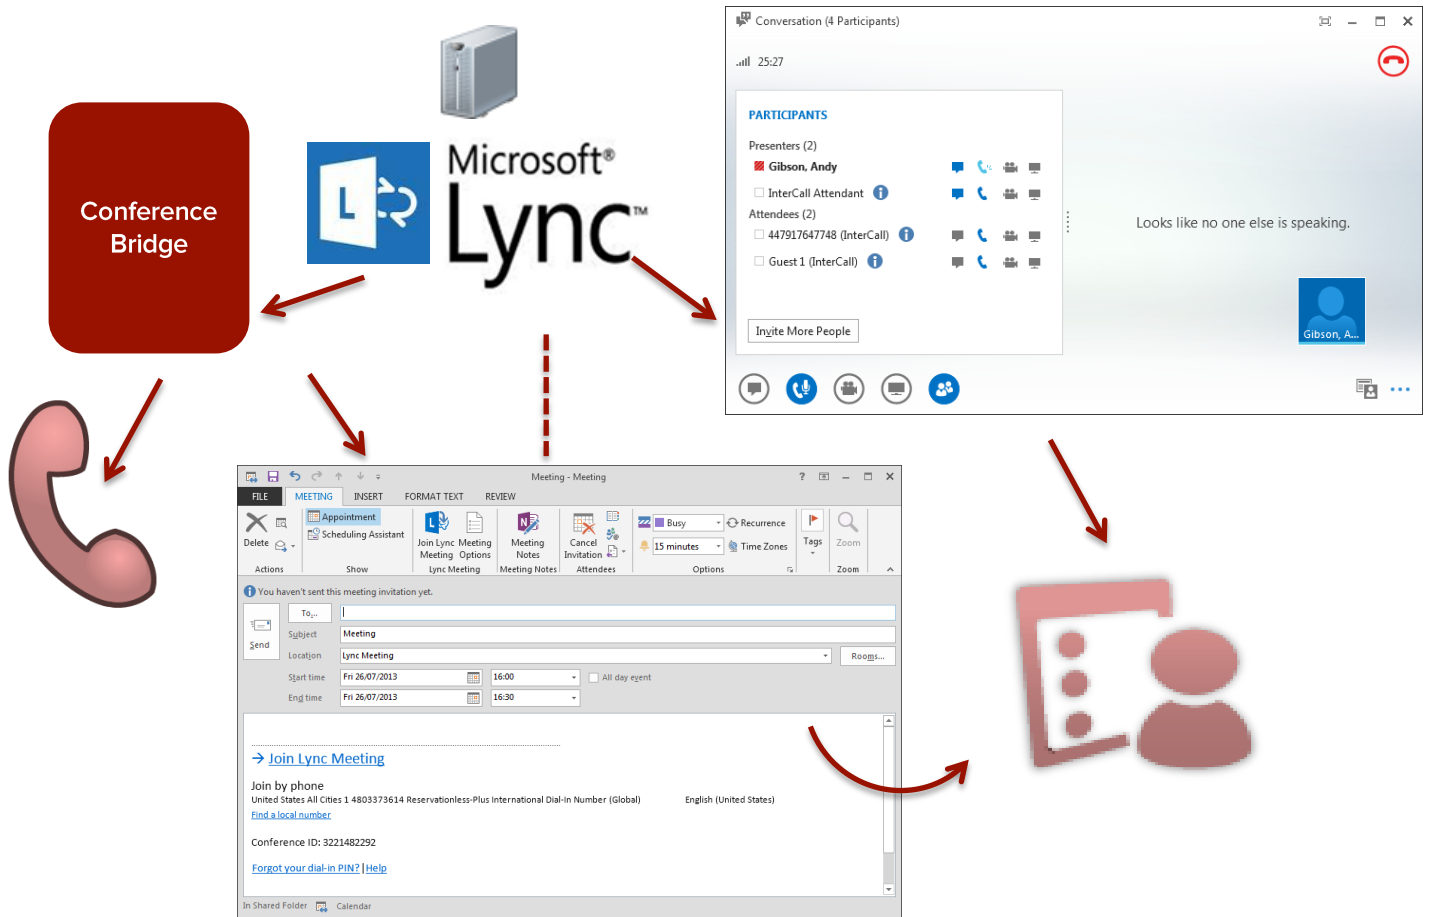

ECC Lync Edition Benefits

- Sign one agreement for over 100 countries.
- Manage your meetings through your Lync client—the same way you do today.
- No need to migrate your entire meeting to the phone to accommodate individual PSTN/off-net users.
- Continue the audio portion of your meeting, even if Lync is unavailable, with our fully redundant conferencing platform.
- Stay connected with on-demand capacity management while reducing Lync audio conferencing bandwidth.

ECC Lync Edition Audio Integration

We offer a server-side native application connecting users wishing to utilize InterCall dial-in numbers to connect to a Lync conference. This solution brings enhanced hosted conferencing capabilities through a single media connection directly to the Lync client on premises.

West is excited to offer advanced call management and superior audio quality to Lync users allowing you to take advantage of cost savings from Lync connectivity without sacrificing call quality or control. Contact your sales representative to learn more.
