Toll Free Origination

BENEFITS AND FEATURES

- **Performance.** Service level agreements for network performance
- **No LATA constraints.** Extensive geographic interconnection options.
- **Flexible.** Soft-switch architecture supports accelerated rollouts.
- **Proprietary tools.** Our web-based applications let you monitor network utilization, track performance statistics and more. West offers customized reporting to meet your unique needs.
- **Experience.** We are the largest competitive provider of toll free origination services.

West Telecom Services aggregates call traffic and connects networks, giving service providers a flexible, reliable and custom solution for carrier-to-carrier traffic exchange. By delivering interconnection solutions for all types of providers, including wireless, wireline, cable and voice over Internet protocol (VoIP), West established itself as a leading provider of tandem switching and toll free services.

We operate a next-generation network of Class 4 and 5 switches strategically located to provide complete coverage of the U.S. and surrounding territories throughout the North American Numbering Plan (NANP). Our carrier-grade interconnection solutions are cost effective and merge traditional telecom, mobile and IP technologies onto a common, efficient backbone.
