

Direct Inward Dial (DID)

TELECOM SERVICES

Optimize your existing coverage at a fraction of the cost while enjoying carrier-grade quality and uptime. Direct Inward Dial (DID) delivered by West provides direct connect presence in select NFL, Tier II and Tier III markets.

West aggregates your traffic and delivers it over a single source IP interconnection. Eliminate multiple facilities, while at the same time eliminating the need to build out your network to manage a local presence. All of which directly translates to significant savings and a shorter time to market.

- Over 3,300 rate centers in 48 LATAs covering nearly 50% of US population
- Easy-to-use web-based interface for monitoring traffic statistics
- Web interface for advanced routing, custom delivery functions and white labeling opportunities

West Telecom Services aggregates call traffic and connects networks, giving service providers a flexible, reliable and custom solution for carrier-to-carrier traffic exchange. By delivering interconnection solutions for all types of providers, including wireless, wireline, cable and voice over Internet protocol (VoIP), West established itself as a leading provider of tandem switching and toll free services.

We operate a next-generation network of Class 4 and 5 switches strategically located to provide complete coverage of the U.S. and surrounding territories throughout the North American Numbering Plan (NANP). Our carrier-grade interconnection solutions are cost effective and merge traditional telecom, mobile and IP technologies onto a common, efficient backbone.
